Get help anytime, 24 hours a day.

You can summon help even if you cannot speak or press your button, because the Fall Detector Pendant can detect a fall **automatically** and send a signal to our Emergency Response Center. Our trained operator will dispatch the appropriate assistance to you immediately.*

The pendant is lightweight and waterproof, so you can wear it in the shower or bath, where many falls occur. In addition to the “auto fall” detect feature, the button can be pressed at any time to call for assistance.

The Automatic Fall Detector Pendant is an advanced health and wellness monitoring solution that features the industry’s most accurate and reliable fall detection technology.

How does it work?

Tiny sensors in the Fall Detector Pendant can tell the difference between normal physical activity and an actual fall.

The device continuously measures the speed of a person’s movements in all directions and compares what it senses to what it considers an actual fall event. If a fall occurs, a signal for help is automatically sent to the Connect America Response Center.**

The Fall Detector Pendant is compatible with both home-based CellularAlert and the MobileAlert/GPS system.

*Service Availability and Access/Coverage on the AT&T network is not available everywhere and at all times. Current GPS location may not always be available in every situation. GPS technology is a feature of the Mobile Device.

**The Fall Detector Pendant does not detect 100% of falls. If able, users should always press their Pendant button for assistance.
